Project Planning Phase
Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	30.03.2026
Team ID	69bf8031c1eab70902258949
Project Name	Enforcing Mandatory Fields Using UI Policies and Migrating Changes with Update Sets
Maximum Marks	

Project Plan: Mandatory Field Enforcement & Migration

Phase 1: Discovery & Requirements

- **[ ] Identify Stakeholders:** Who decides which fields are mandatory?
- **[ ] Define Conditions:** Document the logic.
  - *Example:* If "Category" = "Software", then "Application ID" = Mandatory.
- **[ ] Data Source Audit:** Will data be entered manually (UI Policy) or via API/Import (Data Policy)?

Phase 2: Environment Setup (Development)

- **[ ] Create Update Set:** * *Name:* `[Project_ID] - [Table_Name] - Mandatory Fields - v1`
  - *Application:* Global (or specific Scoped App).
- **[ ] Set as Current:** Ensure your name is on the "In Progress" set.

Phase 3: Technical Configuration

- **[ ] Create UI Policy:**
  - Table: `incident`, `change_request`, etc.
  - Conditions: (Defined in Phase 1).
  - Reverse if false: **True**.
  - Order: `100` (Use 100-step increments).
- **[ ] Create UI Policy Actions:**
  - Field: `[Field_Name]`
  - Mandatory: **True**
  - Visible: **Leave as "True" or "Read-only"** (Never hide a mandatory field).
- **[ ] (Optional) Data Policy:** If enforcing via API, convert UI Policy to Data Policy.

Phase 4: Quality Assurance (QA)

- **[ ] Positive Testing:** Trigger the condition; verify the field becomes mandatory (look for the red asterisk).
- **[ ] Negative Testing:** Break the condition; verify the field is no longer mandatory.

- **[ ] Update Set Review:** Navigate to `sys_update_xml` and filter by your Update Set to ensure both the **Policy** and **Actions** are captured.

Phase 5: Migration (The "Commit" Chain)

- **[ ] Dev:** Close Update Set (Set state to **Complete**).
- **[ ] Test:** 1. Retrieve Update Set.

  2. **Preview** (Resolve any "Missing Record" errors immediately).

  3. **Commit**.

  4. Verify functionality in the Test UI.
- **[ ] Prod:** Repeat the "Retrieve > Preview > Commit" cycle.

Update Set Tracking Log

Use this table to track your movement across the landscape:

Update Set Name	Developer	Source Instance	Target Instance	Status
`US-101-Mandatory-Fields`	[Name]	Dev	Test	Committed
`US-102-Fix-Order`	[Name]	Dev	Test	Previewed
